

Fuji Xerox New Zealand is the 3D partner of choice for some of the country's most innovative businesses. Our customers include leading tertiary education providers, manufacturers, healthcare, jeweller, dental, investment casters and research and development departments.

Being at the forefront of the tremendous growth in the local 3D market has also gained us ongoing global recognition. But although we think big, we know it's often the small things we do that matter to our customers.

The right technology, for the right job

We have the largest single range of 3D printers in New Zealand, spanning the personal (such as miniatures and models), professional (design prototypes), and production (jewellery, short-run manufacturing) areas. Our devices print everything from wax to pure titanium.

We supply the software behind the technology along with all your printing substrates.

Keep your capital to yourself

An affordable 3D device doesn't mean making compromises on quality, reliability and performance, because moving from a traditional capital expenditure (CAPEX) model to an operating lease (OPEX) 3D makes printing truly cost-effective.

Your bank account stays healthy, and your device pays for itself over and over again.

Stay ahead of the game

We know that competition is tough, and keeping up with technology is of paramount importance.

With Fuji Xerox, you're never stuck with outdated 3D printers. Our tailored, flexible operating lease means you update your devices to meet your changing needs, and keep pace with advances in technology.

Support, support and more support

From day one, you are covered by an entire Fuji Xerox team.

We provide project management throughout the implementation phase. After installation, we support you with both product user and technical training that covers applications, post-processes, pre-printing considerations, best practices for printing, device maintenance, and everything you need on the journey through to finishing models.

And should you need any support from there on, we have trained, qualified device engineers who are as passionate about 3D printing as you are.

Our success stories

The Rodin Project

"Our Fuji Xerox 3D Systems printers are critical to the high-level of production and design needed to make Rodin Cars a success." Said David Dicker, Owner, Rodin Cars."
